California Agriculture

(Statistical Review for 1985)

Leads Nation for 38th Year

Sales of farm products from California farms and ranches again led the Nation in 1985. The $13.9 billion total is 45 percent greater than Iowa, the second agricultural state in 1985 and 48 percent ahead of Texas, the nearest state rival in 1984. When the 3 percent decrease from the 1984 value is compared to the 2 precent increase in tonnage produced, the picture of California agriculture that emerges is an economic squeeze of higher yields against lower prices. Impoverishment amid abundance abounds with wide variations between commodities.

The pattern is illustrated by field crops where acreage declined by 2 percent, tonnage increased 3 percent and the value dropped by 4 percent. Fruit and nut crops acreage gained by 3 percent, with tonnage up 6 percent, and value increasing by 4 percent. Vegetables decreased on all counts, acreage, tonnage, and value.

Cash receipts from sales of livestock and poultry products were down 1 percent even though gains were recorded in sales of milk and turkeys. Lower cattle prices counterbalanced these increases and feedlot marketings were down 8 percent from 1984.

Field Crops:

The value of California's 1985 field crop production is estimated at $3.0 billion. This is 4 percent below the $3.13 billion value of the 1984 production. Average value of production per acre harvested in 1985 was $512. This is 3 percent below the $526 for 1984. Production of major field crops in 1985 was 26.9 million tons, up 3 percent from the 26.2 million tons in 1984. The 5,834,000 acres harvested in 1985 was off 2 percent from the 5,955,000 acres harvested in 1984. Only rice, winter wheat, and hay had values of production above the previous year. Cotton, rice, winter wheat, and hay had larger production than the previous year. Harvested acreage of all crops except winter wheat, corn for silage, and hay was less in 1985 than in 1984.

Fruit and Nut Crops:

The total value of California's 1985 fruit and nut crops is estimated to be $2.9 billion, a 4.4 percent increase from the 1984 crop. Grapes accounted for nearly 30 percent of this estimate with $881 million in total value.

California's total fruit and nut production is estimated at 11,380,800 tons, up 5.8 percent from 1984. Total bearing acreage of 1,960,289 was the largest on record with an average value per acre of $1,500.

Deciduous tree fruit production, at 2.33 million tons was down nearly 2 percent from the 1984 total. Substantial increases in fruit output were recorded for apples, dates, table grapes, kiwifruit, and nectarines. Significantly lower production levels were recorded in 1985 for sweet cherries, plums, almonds, and pistachios. Total grape production of 5.2 million tons was up 11 percent from 1984. The 1984-85 citrus crop was 76 percent larger for Valencias, but 23 percent lower than 1983-84 for Navels. Citrus in general showed an overall increase of nearly 9 percent.

Early in the year temperatures fell below freezing in the San Joaquin Valley damaging some citrus. Strong winds along the coast and in the Coachella Valley caused scarring of citrus. In late February, cool, wet weather gave way to a warming trend with conditions returning to normal. Hot temperatures in April put stress on some fruits, especially cherries. A late April wind storm caused some fruit drop and damage from limb rubbing. Normal weather conditions returned to the State during May and early June. This was followed by above average temperatures through most of July. The major effect of the heat wave was to speed up fruit and nut maturity.

Conditions were mostly normal for August. Early fall rains in September significantly impacted raisin harvest. Although cool, wet weather prevailed for two weeks, overall damage to raisins and other crops was relatively light. Two cold fronts hit the State late in the year. Frost was reported in citrus areas with the northern Sacramento Valley the only area significantly impacted.

Vegetable Crops:

California vegetable crops in 1985 showed a decrease in acreage, production and value from the previous year. **Value of production at $3.1 billion** was down 4 percent below 1984 but higher than any previous year. Harvested acreage, at over 985 thousand acres, was 1 percent below the previous year. Major crops showing the greatest increase in value from 1984 were asparagus, broccoli, dry market onions and strawberries. These gains were more than offset by decreased values for carrots, cauliflower, celery, lettuce, market tomatoes and processing tomatoes. **California again led the Nation in vegetable production with 49.6 percent of the U.S. production of principal fresh market crops and 52.7 percent of the U.S. production of the major proccessing crops.**

Livestock and Dairy:

Cattle and calves totaled 5.0 million head on California farms and ranches January 1, 1986. The beef cow inventory decreased 6 percent and beef cow replacements were down from last year. Dairy cow numbers at 1,030,000 continued to increase for the 9th year in a row and producers kept dairy replacement heifer inventories at record high levels. Sheep and lamb inventories at 1,065,000 were the same as a year earlier. The stock sheep inventory was lower than last year, however, sheep and lambs on feed for slaughter market increased from 1985. The December 1, 1985 inventory of hogs and pigs at 145,000 showed a 4 percent increase from the previous year. **Cash receipts from farm marketings of meat animals during 1985**

totaled nearly $1.16 billion. Receipts from the sales of milk and cream during 1985 totaled $2.08 billion.

Poultry:

California egg production totaled 8.1 billion eggs during 1985, a decrease of 3 percent from 1984. The number of layers in 1985 decreased 4 percent, however, eggs per layer increased slightly. Broiler and fryer production at 174 million birds was down 1 percent from the previous year. **Cash receipts from farm marketings of chicken eggs in 1985 were $336 million, broilers $274 million, and turkeys, $205 million.**

California Firsts

- Some 250 crops are recognized in California, including seeds, flowers and ornamentals.
- This report contains information for 61 major crops grown on a commercial scale in California:

13 Field Crops
23 Fruits and Nuts
23 Vegetables
2 Nursery Products and Cut Flowers

In addition, data are shown for 10 livestock and poultry products.

A large number are specialty crops in which the Golden State accounts for most of the U.S. production.

Alfalfa Seed
Almonds
Apricots
Artichokes
Asparagus
Avocados
Broccoli
Brussels Sprouts
Cantaloups
Carrots
Casaba Melons
Cauliflower
Celery
Chinchillas
Crenshaw Melons
Cut Flowers
Dates
Eggs
Figs
Garlic
Green Lima Beans
Grapes
Herbs
Honey
Honeydew Melons
Jojoba
Kiwifruit
Ladino Clover Seed
Lemons
Lettuce
Nectarines

California's Leading Farm Products

- California's "Top Twenty" crop and livestock commodities account for about 76 percent of the State's gross farm income.
- In 1985, dairy products, cattle and calves, and eggs continued to dominate the livestock industry, while cotton, grapes, nursery products, hay, flowers and foliage, oranges and lettuce were the most important crops.

California's Top Twenty

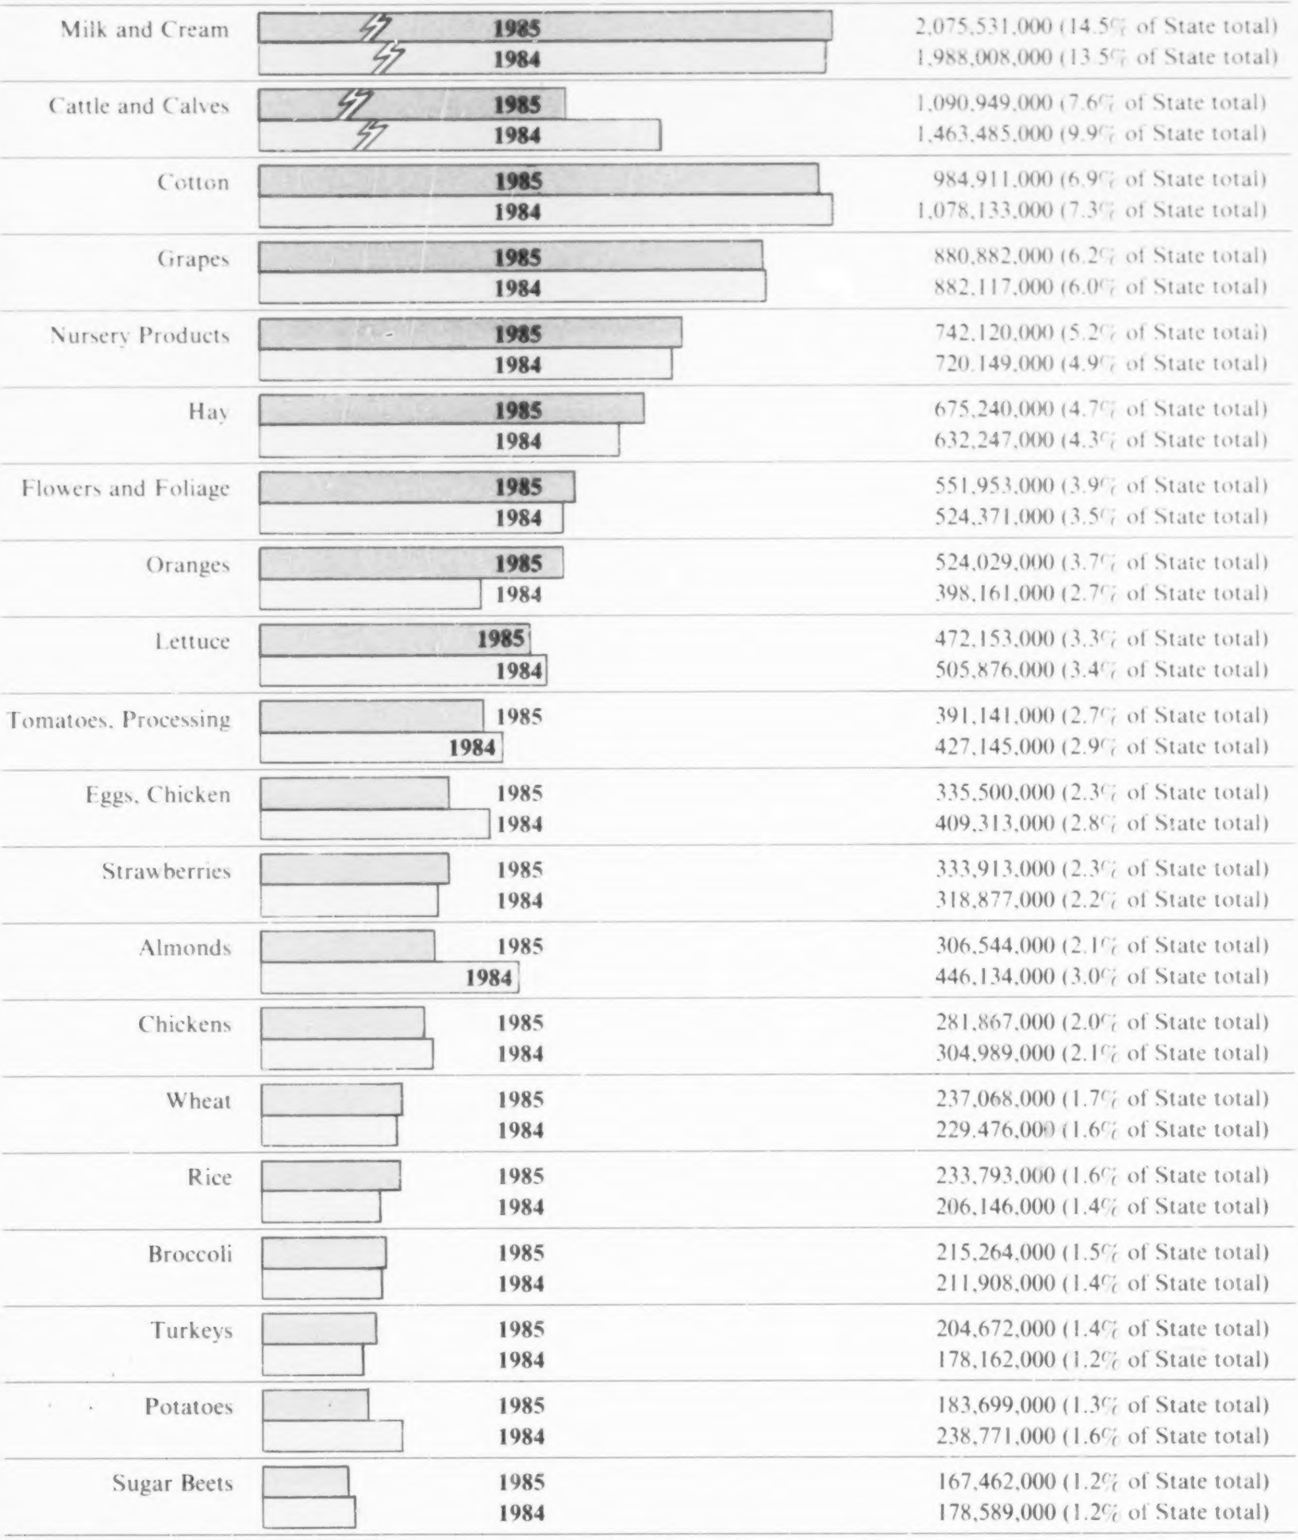
California's Diversity

- California agriculture is considered one of the most diversified in the world, with no one crop dominating the State's farm economy.

  This is illustrated by the fact that most crops individually account for less than 2 percent of the State's total gross farm income.
- California leads the Nation, by a wide margin, in the production of fruits and nuts and vegetables.
- California accounts for 50 percent of the Nation's cash receipts for fruits and nuts, while for vegetables, its share is about 47 percent.

Value of California's 20 Leading Farm Products 1984–85



Milk and Cream	1985	2,075,531,000 (14.5% of State total)
	1984	1,988,008,000 (13.5% of State total)

	1984	882,117,000 (6.0% of State total)
Nursery Products	1985	742,120,000 (5.2% of State total)
	1984	720,149,000 (4.9% of State total)
Hay	1985	675,240,000 (4.7% of State total)
	1984	632,247,000 (4.3% of State total)
Flowers and Foliage	1985	551,953,000 (3.9% of State total)
	1984	524,371,000 (3.5% of State total)
Oranges	1985	524,029,000 (3.7% of State total)
	1984	398,161,000 (2.7% of State total)
Lettuce	1985	472,153,000 (3.3% of State total)
	1984	505,876,000 (3.4% of State total)
Tomatoes, Processing	1985	391,141,000 (2.7% of State total)
	1984	427,145,000 (2.9% of State total)
Eggs, Chicken	1985	335,500,000 (2.3% of State total)
	1984	409,313,000 (2.8% of State total)
Strawberries	1985	333,913,000 (2.3% of State total)
	1984	318,877,000 (2.2% of State total)
Almonds	1985	306,544,000 (2.1% of State total)
	1984	446,134,000 (3.0% of State total)
Chickens	1985	281,867,000 (2.0% of State total)
	1984	304,989,000 (2.1% of State total)
Wheat	1985	237,068,000 (1.7% of State total)
	1984	229,476,000 (1.6% of State total)
Rice	1985	233,793,000 (1.6% of State total)
	1984	206,146,000 (1.4% of State total)
Broccoli	1985	215,264,000 (1.5% of State total)
	1984	211,908,000 (1.4% of State total)
Turkeys	1985	204,672,000 (1.4% of State total)
	1984	178,162,000 (1.2% of State total)
Potatoes	1985	183,699,000 (1.3% of State total)
	1984	238,771,000 (1.6% of State total)
Sugar Beets	1985	167,462,000 (1.2% of State total)
	1984	178,589,000 (1.2% of State total)

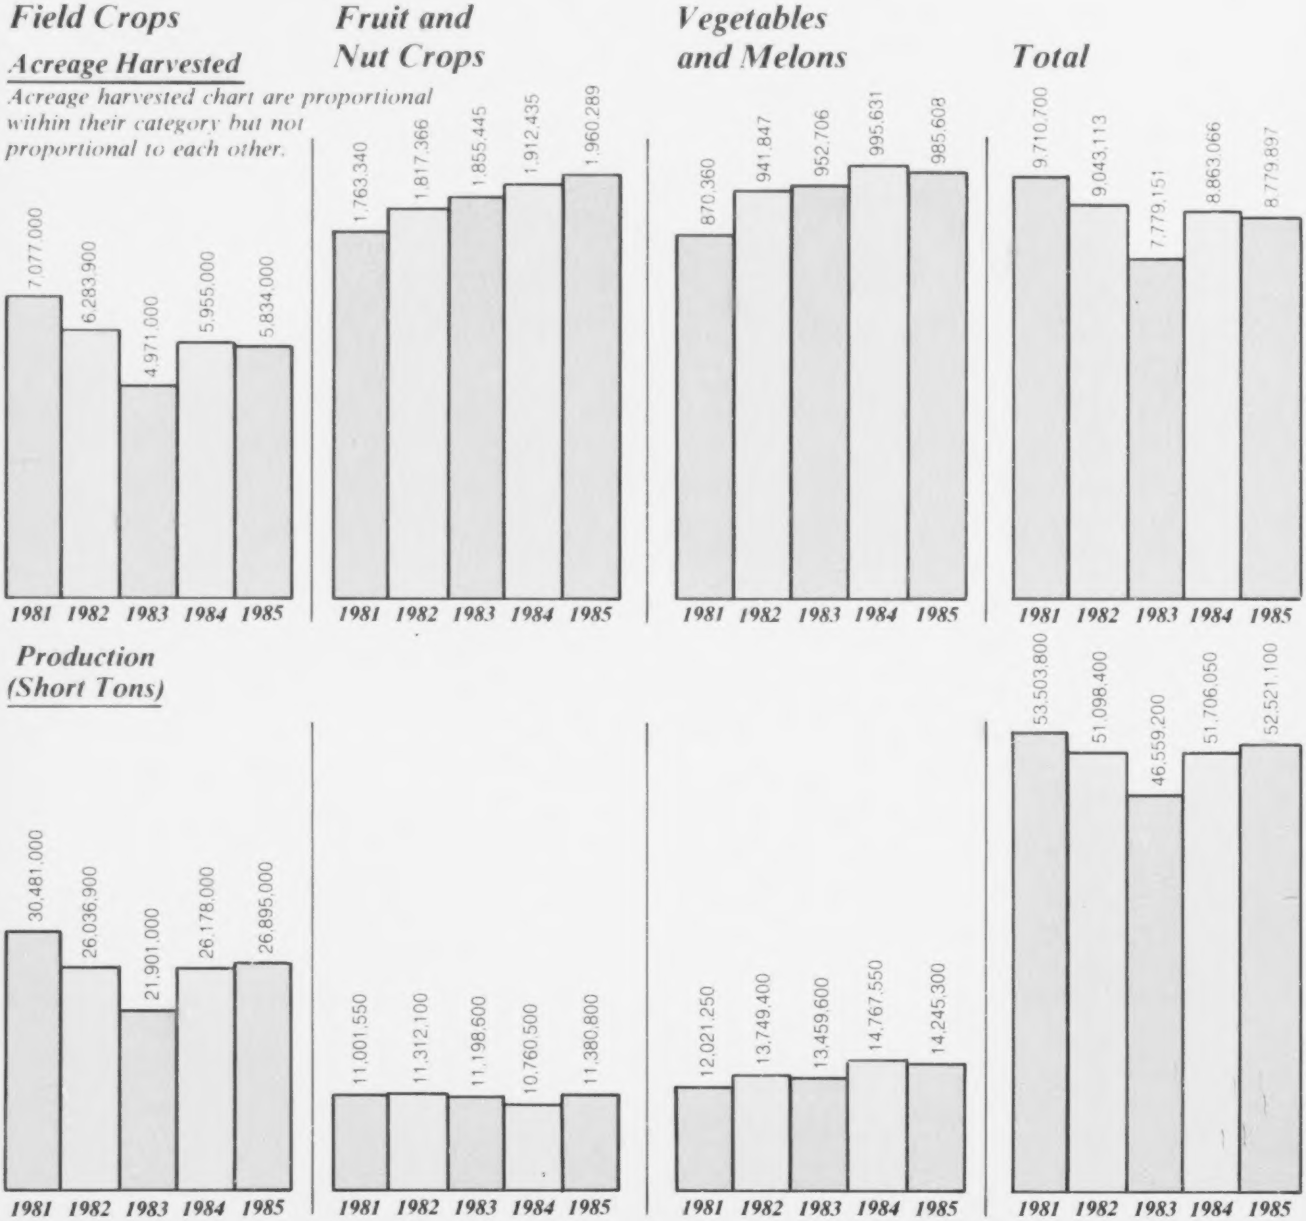
**Based on value of quantity harvested for crops and on value of quantity marketed for livestock and poultry products.*

Acreage and Production by Principal Groupings for California, 1981–85

- Acreage of all crops in 1985 totaled 8.8 million acres, virtually unchanged from 1984 but showing a decline from 1981 and 1982.
- Total tonnage increased 2 percent, with a 6 percent increase in fruit and nut production being balanced by a 4 percent decline in vegetables and melons.
- Field crops declined in acreage 2 percent while increasing production 3 percent.
- Total crop tonnage for 1985 stands at 52.5 million tons, double the level recorded in 1950.

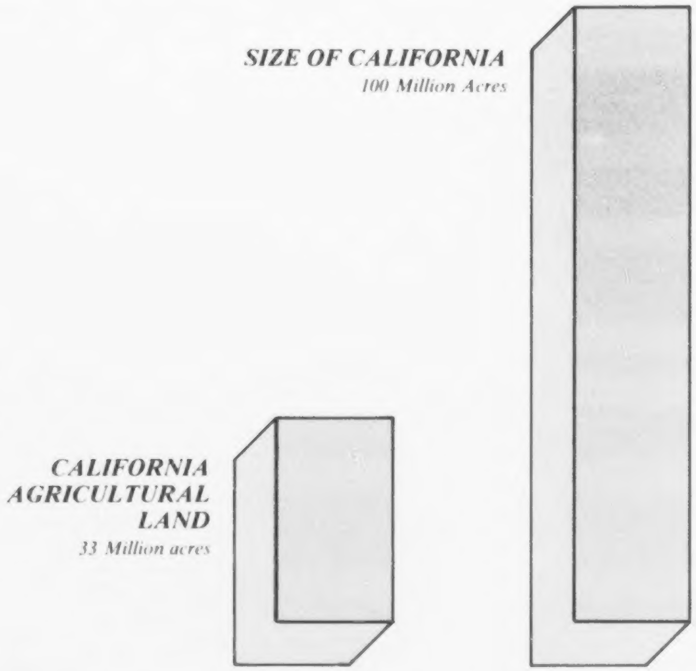
Farm and Land Values

- About 10 percent of the national gross cash receipts for farming are produced in California on 79,000 farms.
- This constitutes 3 percent of the Nation's total (based on the Census of Agriculture definition of farms being places with annual sales of agricultural products of $1,000 or more).



Acreage harvested chart are proportional within their category but not proportional to each other.

California Land



● Average California Farm Size	415 Acres
● Average U.S. Farm Size	445 Acres

TABLE 5. California's Principal Agricultural Exports with Comparisons to U.S. Total Agricultural Exports, Calendar Year 1985 13

This 1985 estimate of California's agricultural exports is being published in two sections which are available separately:

- **Annual Bulletin** contains tables of California's international trade by commodity.
- **Statistical Appendix** contains tables of commodity shipments by country of destination and tables showing all agricultural commodities shipped to selected countries.

California's Agricultural Exports

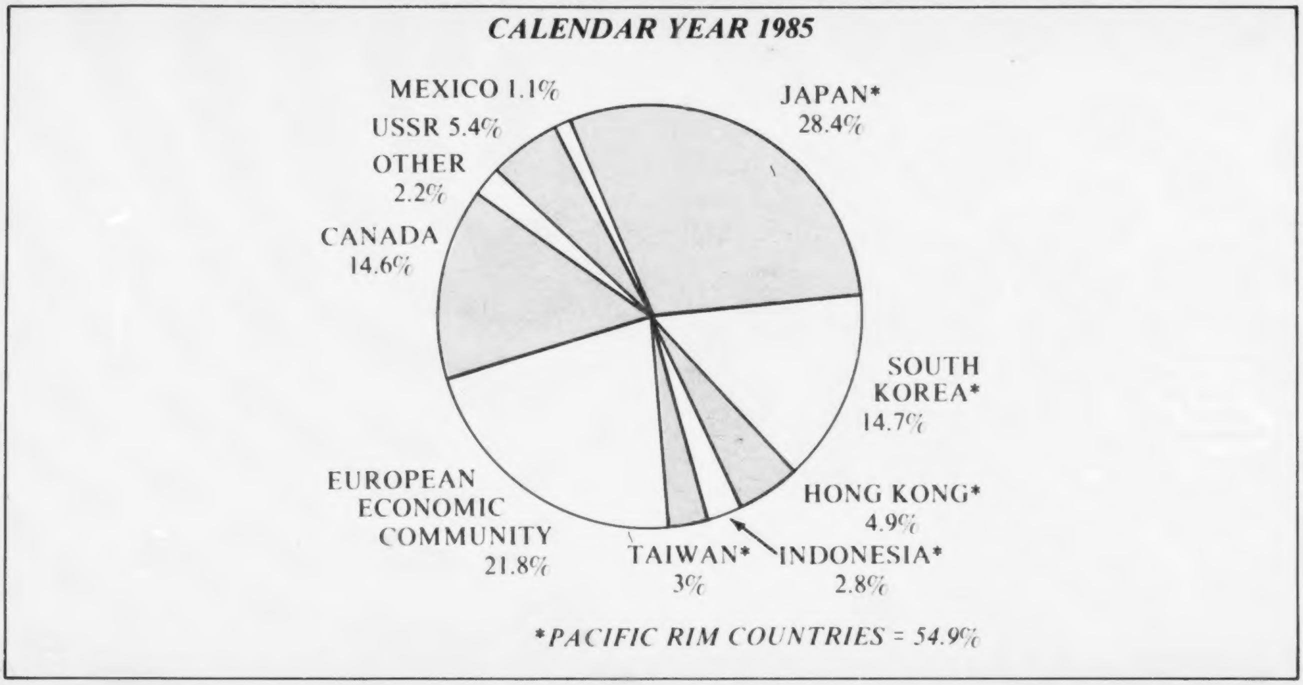
California's Agricultural Export Markets, Value Basis



Highlights of California's Agricultural Exports
Calendar Year 1985

Table 1 Highlights

- California's agricultural export decline slowed to a 3 percent loss in value in 1985 compared to 1984.
- The $2.8 billion value of the State's farm and ranch products going into international trade represents little change and offers hope that exports are "bottoming out."
- Selling more products at lower prices is a familiar pattern among commodities both in the international and domestic markets.
- Cotton, the leading California agricultural export increased in volume by 5 percent but was virtually unchanged in value.

Increased efforts to promote agricultural exports by both the State and Federal governments are now operating. Those interested in applying for matching funds for export promotion should contact the Export Promotion Program, Director's Office, Department of Food and Agriculture, 1220 N Street, Room 409, Sacramento, CA 95814, (916) 322-4339.

Table 2 Highlights

California's Agricultural Export Profile, 1985

Emphasizes the importance of international trade to California's ranchers and growers

- Each commodity's exports are compared to State production.
- The percentage going into international trade ranges from less than one percent of the barley grown in California to 68 percent of the almonds.
- Lower prices and reduced sales to Canada contributed to the decline in the percentage of vegetables that were exported.
- Increased competition abroad was a major factor in many cases.
- In 18 crops, California provides more than 90 percent of U.S. exports (see Table 2).
- The Golden State's part of the national total has risen more than two percent between 1984 and 1985 to 9.8 percent. This reflects the decline in exports of other states while California's declined only slightly.
- Increased sales of almonds and walnuts helped California become the leading agricultural export state.
- The acres required to produce California's agricultural exports changed very little between 1984 and 1985.
- The 1.8 million acres represents 21 percent of acreage harvested when estimated using state average yields. This calculation does not make allowances for land used to produce feed for livestock that is exported.

California's leading exports

Cotton	The value of cotton exports remained constant with volume going up by five percent. Lower prices and continued competition from foreign growers have hampered international sales of California's high quality fiber. Government export sales assistance is now being offered in order to make our cotton competitive on the world market.
Almonds	The rebounding export pattern was sparked by $66 million shelled almond sales to the U.S.S.R. This market was opened by a poor hazelnut crop in Turkey that stymied the Russians usual supply pattern. A falling dollar value helped maintain and increase demand worldwide.
Oranges	Having become a deficit area for processed orange juice makes California depend on fresh oranges for the international trade. The four percent value decline from 1984 actually represents a 25 percent volume drop due to no low value fruit going into processing for export and a higher price per box received by growers. California's share of the U.S. exports increased to 91 percent while the share of the California crop entering the export trade remained constant at one-fourth.
Grapes	The value of total grape exports was unchanged from 1984 to 1985 but within this total several volume changes took place. Fresh exports dropped 18 percent, raisin exports gained 22 percent and processed (juice, canned, and wines) grapes increased 35 percent. The revival of raisin and wine sales is a particularly encouraging trend even at lower prices.
Rice	Sales of California rice abroad have been following a roller coaster pattern. This year's 19 percent increase only brings the total to one-third the 1981 high point. A concessional sale to the Phillipines kept the year from being a marketing disaster.

Table 3 Highlights

Comparison of California's Agricultural Production with Estimated Exports

- The farmgate value of exports is shown in Table 3 and is compared to total State production as estimated by the California Agricultural Statistics Service or the Summary of California County Agricultural Commissioners' Reports. This comparison is made using quantities exported based on State average prices and varies significantly from the value declared at the port of embarcation used in Table 1. In some products, the high quality selection process and special packing required for overseas markets augments the value considerably.
- A comparison of California to U.S. exports is computed on the same basis: valuing exported quantities at National average farmgate prices.
- Calendar year export data do not coincide with the varying harvest periods and marketing years of California's diverse production. In noted cases, the comparison of exports to production is made with the previous calendar year's crop since considerable delay is encountered in shipping products harvested late in the year.

Field Crops

- Cotton, even with a lower total value in 1985, is the leading export crop produced in California.
- About two out of three bales produced were exported in 1985.
- This constitutes one-third of total U.S. cotton sales abroad and is shipped to Pacific Rim markets for manufacture into cotton clothing and other products that are in turn sold worldwide.
- Rice sales rose 19 percent and wheat dropped 31 percent in 1985, just the opposite of 1984's change. Concessional sales by the U.S. government aided rice but wheat sales fell in the face of competition.
- Dry beans and cottonseed regained some markets lost during 1984.

Fruit and Nut Crops

- Almond export volume gained 60 percent and even with lower prices the value increased 27 percent.
- Walnuts also increased but were hit late in the year with a retaliatory tariff by the European Economic Community.
- Kiwifruit exports revived and grapefruit capitalized on the short supply in Florida and Texas.
- Oranges and lemons lost in total value due to bowing out of the processed exports market although fresh exports remained strong.
- Peaches and pears lost in export value due to worldwide competition among canned goods, together with increasing consumer preference for fresh products.

Vegetables, Flowers, and Berries

- Strawberries, with an export value of $36 million in 1985, climbed the export list to become California's leading product in this category.
- Tomatoes and lettuce also registered exports of over $30 million putting them in the top twenty exports just ahead of onions and flowers and nursery products.
- Lower exports to Canada throughout 1985 reduced the total value of vegetable exports in general.
- Losses were recorded for tomatoes, lettuce, onions, celery, broccoli, cauliflower, potatoes and carrots.

Livestock and Poultry

- Estimating the quantity and value of livestock products being exported and comparing this to a farm value is complicated by the variety of products reported—hides, tallow, offal, meats, and live animals, for example.
- The valuations assigned to dairy products donated to foreign nutrition programs from U.S. government stockpiles do not reflect their market value.
- Beef and dairy product exports declined in 1985 while chickens and eggs regained a portion of losses felt in former years.
- Turkeys made a substantial 36 percent gain but this industry is still marketing only 1.3 percent of the State's production abroad.

Tables 4 and 4A Highlights

Changes in Value of California Exported Commodities

1979–1985

- Changes in value of California's exports of selected leading commodities and the total exports over the seven-year period are shown in Table 4.
- The value in 1985 has returned to the 1979 level.
- The peak for most commodities was in 1981.
- A wide variation exists between commodities: strawberries have tripled while the 1985 cotton is at its lowest level in the entire period.
- No adjustments have been made in these values for inflation.

1965–1985

- Changes in California's agricultural exports over a twenty-year period are shown in Table 4A.
- Preparation and publication of State export data has not been continuous but a report done in 1966 makes this comparison possible for some commodities. Since the earlier report combined all almonds and walnuts, the comparison to 1985 is done by adding in-shell and shelled tonnages.
- Beef categories have also been combined with boned and with-bone being added directly.
- Some export products have grown so dramatically that the percentage increases are outside the realm of usual comparisons. This is true where exports have grown from a very low base. Both volume and value are shown to add perspective to the data.
- No allowances have been made for inflation in the valuation estimates.

Table 5 Highlights

California's Share of the Nation's Agricultural Exports

- California's estimated agricultural exports for calendar year 1984 are presented in Table 5 on an individual item basis. U.S. total exports of each item are also shown, and the share of the Nation's exports produced in California is calculated using this data.
- Using port values, California exported about 10 percent of the total U.S. agricultural exports in 1985.
- While California produces about half of the Nation's total fruits and nuts, 61 percent of the exports of these commodities come from the Golden State.
- The total U.S. export value is heavily weighted with commodities such as soybeans and tobacco that are not produced in California.
- Among the State's crops, there are 26 where more than half of the total exported from the U.S. comes from California. Of these, eleven are 100 percent from California including almonds, apricots, dates, figs, raisins, olives, kiwifruit, pistachios, prunes, walnuts, and garlic.
- To arrive at the estimates in Table 5, each selected commodity was individually studied. For some that are grown only in California, the National export data are sufficient. For others produced outside California, modifications are made using California port data and information from commodity traders and exporters. Additional information on shipments of fruits and vegetables to Canada was obtained from the Canadian government.
- Only when California grown products are not easily identifiable (hides and skins, tallow, meats, and poultry, for example) is the California share of U.S. production used. This system is also used to calculate the "all other" category using factors obtained from the Economic Research Service of the U.S. Department of Agriculture. The factors were calculated for 15 groups of commodities not listed separately in Table 5 and applied to the U.S. totals that are shown in Table 8 of the Statistical Appendix to this bulletin.

Data Guidelines

- Because data sources often differ in what is included or excluded, various export studies may report different numbers depending on the items and trade patterns included.
- The California Agricultural Statistics Service and the U.S. Department of Commerce are constantly updating and revising data. The most recent available revision was used at the time of the assembly of this report: June–September, 1986.
- Shipments under the federal Agricultural Trade Development and Assistance Act and Act for International Development are included.
- Agricultural commodities in this report consist of non-marine food products and agricultural products that have not passed through complex manufacturing processes. This includes raw hides and skins, vegetable and animal fats and oils, and unrefined wines.

Data Not Included

- Manufactured items such as textiles, leather, boots and shoes, baked goods and distilled alcoholic beverages are not included.
- Shipments between the 50 states, Puerto Rico and U.S. island possessions (Virgin Islands, Guam, etc.).
- Shipments in transit from one country to another through the U.S.
- Shipments to U.S. Armed Forces and Diplomatic Missions abroad for their own use.

Information Sources

The following is a list of major sources used in this report.

U.S. Department of Commerce, Bureau of the Census, Foreign Trade Division data series EA622, U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination by Customs District of Exportation by Economic Class and Method of Transportation, available on magnetic computer tape.

U.S. Department of Agriculture, **Agricultural Statistics, 1985.**

U.S. Department of Agriculture, Economic Research Service, **Foreign Agricultural Trade of the United States, 1985.**

Statistics Canada. Import data from customs records obtained on special order tape.

Agriculture Canada. **Annual Unload Report—Fresh Fruits and Vegetables on 12 Canadian Markets.**

U.S. Department of Agriculture publications: **Foreign Agriculture, Foreign Agriculture Circulars, Outlook for U.S. Agricultural Exports, Agricultural Outlook,** and periodic releases of the Crop Reporting Board.

Federal/State Market News Service Publications. Frequent market reports sometimes include exported commodities.

Marketing Organizations and Individuals. Many people supplied opinions and information about the commodities with which they are professionally involved. We wish to thank all those who contributed their expertise.

Farm values and quantities used to compare exports to the total crop were taken from existing publications of the California Agricultural Statistics Service and the U.S. Department of Agriculture's National Agricultural Statistics Service published material. Conversion of commodities from export form to farm production units was done using **Statistical Bulletin No. 616, Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products.** Table 5 comparisions between California and U.S. total exports are done solely on export values.

The final estimates of California's agricultural exports in this bulletin were made using the port data, information from the Canadian government on unloads of fresh fruits and vegetables, and by contacting representatives of commodity groups, exporters, and handlers to obtain their opinions. Each commodity was treated separately and the estimate was made on the best available information. It should be emphasized that these are estimates since exact data are not available.

Table 8. Other Agricultural Commodities Exported from California's Port Districts and U.S. Totals Not Listed in Table 5, Calendar Year 1985 .... A-80

INTRODUCTION: The publication Exports of Agricultural Commodities Produced in California is published in two parts: an Annual Bulletin and a Statistical Appendix. The Annual Bulletin provides a review of data and information sources, the value and quantity for California's major agricultural export items with year-to-year comparisons, farm value, acreage required to produce selected agricultural exports, and comparisons of California exports to those of the nation. The Statistical Appendix provides detail on value and quantity of exports of agricultural goods that are of interest to California. Detail on commodity movement to specific markets is provided by country with commodity detail, and by commodity with individual country detail. Statistics on the method of shipment, either by air or vessel, are also presented within the country detail tables. All dollar amounts represent the value of the product as it arrives at the port of exportation including transportation, insurance, and other costs (c.i.f. port of export). Costs incurred beyond the U.S. port of exportation are not included.

Port district statistics reflect total shipments of the item through the port district, without consideration of the point of origin of the commodity within the United States. Therefore, individual users of this data must apply their own knowledge of trade patterns to determine the portion of a specific product that originates on California farms and ranches. Products moving to Canada from California are rarely reflected in the California port district statistics. Additional information on trade with Canada is available from the Federal-State Market News Service and Agriculture Canada, referenced in the Annual Bulletin.

Table 6 provides commodity information by destination, with total U.S. exports and movement of the goods through the California port districts. Over 150 agricultural products are presented.

Table 7 shows exports to 25 countries based on the total value of U.S. exports in over 400 separate agricultural commodities. Commodities are presented in numeric order based on the Bureau of Census Schedule B Classification. Statistics include total quantity and value exported from the U.S. and the California ports, and gross quantity and value of air and vessel shipments. The total of air and vessel quantity statistics may exceed those for the port districts since these "method of transportation" columns reflect gross weight, rather than the net weights shown in the U.S. and California Port District totals. Users are again cautioned to avoid assuming that all product movement through the port districts reflects production occurring in California.

The final table, Table 8, lists products that are not treated individually in Table 5 of the Annual Bulletin. Commodities that are not produced commercially in California have been excluded, so the totals presented do not coincide with similar lists published by the Foreign Agricultural Service.

Additional details on exports of other commodities of interest to California or on shipments to countries not included in this report may be obtained on a request basis from the Agricultural Statistics Branch, 1220 N Street, Room 243, Sacramento, CA 95814.

August 1986

NOTES TO THE STATISTICAL APPENDIX

SOURCE: The tables in this appendix were prepared from data extracted from the U.S. Department of Commerce, Data Tape EA622, U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination by Customs District of Exportation by Economic Class and Method of Transportation.

Table 6: "Agricultural Exports: U.S. and California Port District Totals" summarizes data for 1985 exports of over 150 agricultural products by destination.

1. "California Ports Quantity" is net units of product at the port of exportation.

2. Countries with purchases of less than $5,000 of a specific commodity are totaled and included as "Other".

3. The sum of all individual country values for a commodity may differ from that presented under "Total" due to rounding.

4. Statistics for California port districts should be applied carefully since value and quantity for products shipped from California ports could include production originating in other states.

Table 7: "1985 Annual Exports by Country" details exports to 25 countries, selected by the total value of their U.S. purchases of 400 agricultural products of commerical interest to California.

1. Individual commodities are ranked within each country by the total U.S. purchase value of the commodity.

2. "U.S. Total Quantity" and "California Ports Quantity" are net quantity at the port of exportation.

3. "Vessel Quantity" and "Air Quantity" are gross weights at the port of exportation, and may total more than "U.S. Total Quantity" or "California Ports Quantity".

Table 8: Other Agricultural Commodities Exported thru U.S. and California Port Districts provide supplementary data for the commodities not included in Table 5.

1. A modified production share approach was used in calculating the contribution of these commodities to California's agricultural exports, as explained in the introduction to Table 5 in the Annual Bulletin.

CALIFORNIA FRUIT AND NUT STATISTICS

This bulletin contains preliminary estimates for 1986 and final 1985 California fruit and nut statistics. Final revisions for 1985 have been made based on review of marketing order data, recorded truck and rail movement, quantities used by processors, and other available check data. Estimates of production and prices for 1986 are preliminary and subject to revision after final data are received.

Utilization and price data are shown in one table for ease of reading.

Explanatory "Notes for the Users" on page 1 provide general information regarding the data shown and covers special or unique factors pertaining to individual crop data.

Data presented in this publication are made possible by the voluntary cooperation of growers, fresh shippers, processors, and other representatives of the California fruit and nut industry. Their cooperation is greatly appreciated.

NOTES FOR USERS

1. PRODUCTION

Total production is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested, primarily for economic reasons.

Utilized production is the amount sold plus the quantities used at home. This production was formerly called production of value.

Economic abandonment is the difference between total and utilized production. This category identifies the quantity of fruit not harvested for economic reasons or cullage of harvested fruit.

2. UTILIZATION

Utilization refers to first, not necessarily final, utilization. For example: frozen fruit used for preserves is included as frozen.

Canned: Includes all canned products — jam, jelly, baby food, nectar, juice, puree, and all fruit packs combined.

Dried: Tonnage published is the equivalent fresh tonnage weight for most fruits. Data acquired from dry yards and dehydrators provide the dried tonnage and the estimated drying ratio. The equivalent green tonnage used for drying is derived. The following table lists the tons of green fruit required to produce one dried ton.

Year	Apples	Apricots	Figs	Raisins	Freestone Peaches	Pears	Prunes
1985	8.50	6.50	3.00	4.50	7.83	6.50	3.05
1986	N/A	6.80	3.00	4.26	9.03	6.40	2.94

3. PRICE AND VALUE

a. Noncitrus Fruits and Nuts

Average grower return: The entire data series is based on the equivalent return at the first delivery point. The first delivery point price is defined as the price received by growers for fruit delivered at the local market, packinghouse, receiving station, or any other first delivery point.

Price and Value: Prices are season averages computed on the basis of all methods of sale. Returns at the processing plant door for "processing" utilization and returns at the packinghouse door for "fresh market" utilization are weighted together to obtain the season average. Value estimates in this report cover the marketing season or crop year or years and should not be confused with cash receipts from these crops for a single calendar year. The season average price is applied to utilized production to compute value of production.

b. Citrus Fruits

Price and value, published as "grower return per box", are based on equivalent packinghouse door returns for the entire data series.

4. CITRUS AND AVOCADO CROP YEAR

Production for the crop year is from the bloom of the first year shown. For example, 1984-85 would represent the 1985 production from the 1984 bloom.

1986: TOTAL VALUE UP, GRAPES REMAIN LEADER

The total value of California's 1986 fruit and nut crops is estimated to be $3.2 billion, an 8.7 percent increase from the 1985 crop. Grapes accounted for nearly 31 percent of this estimate with $989 million in total value.

California's total fruit and nut production is estimated at 10,303,250 tons, down 9.0 percent from 1985. Total bearing acreage of 1,974,000 was the largest on record. The average value per acre of $1,624 was up $113 from a year ago.

The 1986 year started off warmer than normal with only light amounts of precipitation. In February, near torrential rains caused extensive damage to almonds and other early blooming fruit and nut crops. A series of storms hit hardest in the upper San Joaquin Valley. For most of March, April and May temperatures ran slightly above normal with periodic rain showers followed again by fair, mild weather. The spring-like weather was interrupted only occasionally by below average temperatures. Crop progress continued nearly two weeks ahead of normal. June arrived with hot and dry weather lasting most of the month. Average to above average temperatures prevailed most of July, August and the first week of September. The first major precipitation and cooling trend came in mid-September and lasted through mid-October. The cool, damp weather delayed harvest of the remaining major fruit and nut crops but virtually no damage occurred. Late October was a mixture of warm and cool trends with very little rain. With the exception of light precipitation at mid-month, November was warm and dry. This trend continued through December. Field activity progressed nicely but many growers had to make additional irrigations.

TABLE 1 — CALIFORNIA ALL FRUITS AND NUTS: Total acreage, production, and value, by groups, 1985-86

Crop	Year	Bearing Acres	Production Short Tons	Average Value Per Acre a/ Dollars	Value of Production 1,000 Dollars
Deciduous Tree Fruits b/	1985	272,200	2,331,400	2,227	606,247
	1986	271,500	1,975,500	2,199	597,139 g/
All Grapes c/	1985	682,000	5,252,000	1,300	886,860
	1986	691,000	4,690,000	1,431	988,575
Tree Nuts d/	1985	619,000	465,050	836	517,777
	1986	631,400	342,450	1,216	767,577 g/
Semitropical Tree Fruits e/	1985	124,100	363,000	1,670	207,231
	1986	127,300	323,000	1,866	237,508 g/
Citrus Fruits f/	1985	254,500	3,069,500	2,870	730,437
	1986	252,800	2,972,300	2,432	614,757
Total	1985	1,951,800	11,480,950	1,511	2,948,552
	1986	1,974,000	10,303,250	1,624	3,205,556

a/ Price and value estimates for citrus fruit are based on equivalent packinghouse door returns. Noncitrus fruits and nuts are based on equivalent returns at the processing plant door for "processing" utilization and returns at first delivery point for "fresh market" utilization.

b/ Includes apples, apricots, cherries, kiwifruit, nectarines, peaches, pears, plums, pomegranates, and prunes.

c/ Includes raisin, table, and wine varieties.

d/ Includes almonds, pistachios, and walnuts. Includes almonds on a meat basis and pistachios and walnuts on an in-shell basis.

e/ Includes avocados, dates, figs, and olives.

f/ Includes grapefruit, lemons, oranges, tangerines, tangelos, and tangors.

g/ Value for figs, kiwifruit, prunes, and walnuts was estimated.

a/ Equivalent return at the first delivery point.

b/ Return at the processing plant door or packinghouse door.

c/ The 1985 O.M. Survey resulted in the following adjustments: Raisin Grapes, bearing acreage was reduced to 250,700 due to 30,000 acres enrolled in the Raisin Industry Diversion Program and 2,800 acres not harvested; Wine Grapes, bearing acreage was reduced to 295,800 acres due to 25,000 acres not harvested. The adjusted yields per acre are 10.10 and 7.24 tons/acre for Raisin and Wine varieties, respectively.

d/ The 1986 O.M. Survey resulted in the following adjustments: Raisin Grapes; bearing acreage was reduced to 231,000 due to 50,000 acres enrolled in the Raisin Diversion Program and 5,100 acres not harvested; Table Grapes; bearing acreage was reduced to 81,000 due to 3,300 acres not harvested; Wine Grapes; bearing acreage was reduced to 300,000 due to 20,600 acres not harvested. The adjusted yields per acre: Raisin Grapes, 8.53 tons, Table Grapes, 7.04 tons, Wine Grapes, 7.17 tons.

TABLE 3 — CALIFORNIA NUTS: Acreage, production, price, and value, 1985-1986

Crop	Year	Acreage: Bearing	Acreage: Non-Bearing	Production: Total	Production: Unit	Production: Per Bearing Acre	Value of Utilized Production: Grower Return Per Unit	Value of Utilized Production: Total Value
							Cents Per Pound	1,000 Dollars
Almonds, Shelled a/	1985	409,200	26,000	465,000,000	Lbs.	1,140	68.00	306,544

a/ Data will be available July 9, 1987.
b/ Processed fruit included in fresh market total to prevent disclosure of individual operations.
c/ Types of processing included in total processed to prevent disclosure.
d/ Canned figs included in fresh to avoid disclosure.
e/ Includes value of the dried fruit and drying costs.
f/ Crushed includes limited size and noncanning, plus culls and oil. See Table 11 for breakdown by variety.
g/ Small amount of pickled and crushed included in canned.
h/ Crushed included in canned to avoid disclosure of individual operations.
i/ Processed and fresh not published to prevent disclosure of individual operations.

CALIFORNIA LIVESTOCK STATISTICS

1986

FOREWORD

Ranchers, farmers, and businessmen need reliable and accurate statistical data as a basis for planning their operations. The information contained in this bulletin is published to assist people in the livestock industry in planning and making operational decisions.

Contained in this bulletin is a compilation of official estimates of livestock inventory numbers, production, income, and related statistical information for cattle and calves, sheep and lambs, and hogs. 1985 and earlier figures are revised while 1986 figures are generally preliminary. The data in this bulletin supercedes any previous issues.

The preparation and release of estimates is a primary function of the California Agricultural Statistics Service. This Agency is the California office of the National Agricultural Statistics Service of the United States Department of Agriculture. Under a cooperative agreement, this Agency also serves as the Agricultural Statistics Branch of the California Department of Food and Agriculture. As part of a Federal Agency, its functions are correlated with the National programs to provide uniform statistics of agriculture for the Nation. As a State service, this office develops additional statistical information to fulfill local needs, generally in the form of county estimates.

The voluntary cooperation of ranchers, farmers, and agri-businessmen is the primary data source of the California Agricultural Statistics Service. We appreciate the faithful service and cooperation and extend our sincere thanks. The statisticians responsible for much of the data published in this bulletin are Mark Aitken, Neil Gum, and Tom Marr.

JIM TIPPETT
State Statistician

1/ Includes 451,000 cattle in feedlots being finished for slaughter market.
2/ Includes 395,000 cattle in feedlots being finished for slaughter market.

Sheep and Lambs

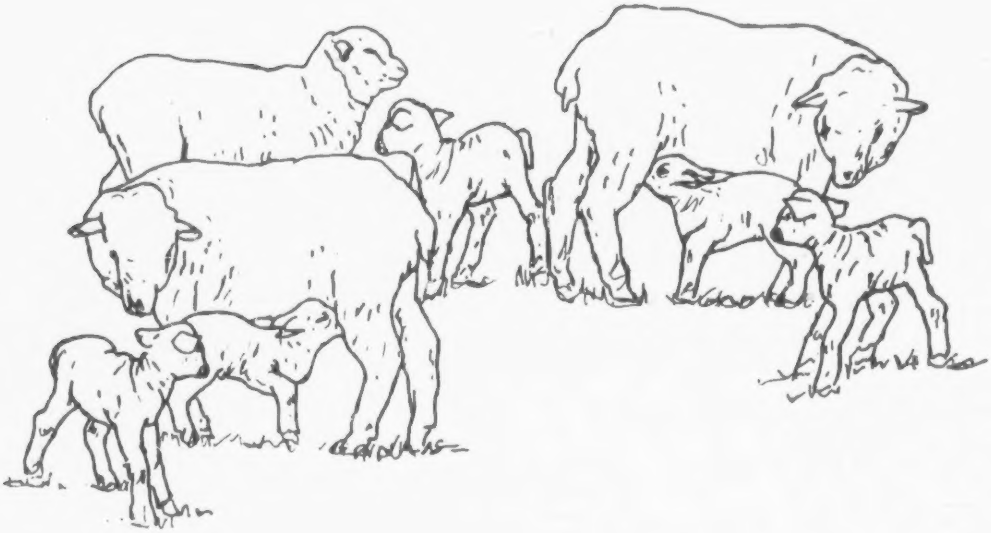

TABLE 21—Sheep and lambs inventory, supply, and disposition, California, 1982-86 (U.S. 1985-1986) 1/

Year	Beginning Inventory January 1	Lamb Crop	Inshipments	Marketings 2/		On Farm Slaughter	Deaths		Ending Inventory January 1 (Following Yr)
				Sheep	Lambs		Sheep	Lambs	
	1,000 Head								
1982	1,210	750	295	120	820	25	80	95	1,115
1983	1,115	730	161	81	669	23	39	79	1,115
1984	1,115	720	191	89	737	23	37	75	1,065
1985	1,065	690	165	87	629	25	44	70	1,065
1986	1,065	630	198	111	685	24	43	50	980
U.S.									
1985	10,443	7,381	1,693	1,569	6,478	135	544	839	9,983
1986	9,983	7,349	1,781	1,306	6,079	127	498	776	10,328

1/ Balance sheet estimates: The sum of inventory at beginning of year (January 1), lamb crop, and inshipments is equal to the sum of marketings, farm slaughter, deaths, and end-of-year inventory.

2/ Includes custom slaughter for use on farms where produced, but excludes interfarm sales within the State.

1986	145	133	131	33	262	14	16	150
U.S.								
1985	54,073	42,545	43,484	3,696	86,694	446	4,345	52,313
1986	52,313	40,313	41,970	3,463	82,608	358	4,133	50,960

1/ Balance sheet estimates: The sum of inventory at beginning of year (December 1) pig crop, and inshipments is equal to the sum of marketings, farm slaughter, deaths, and end-of-year inventory.

2/ Includes custom slaughter for use on farms where produced, but excludes interfarm sales within the State.

3/ Excludes custom slaughter for farms at commercial establishments.

CALIFORNIA VEGETABLE CROPS

This bulletin, prepared annually, contains the most recent estimates of acreage, production, and value for principal commercial vegetables, melons, and strawberries grown in California for the period 1985-86. Harvested acreage by county is included. Also included are tables showing 1985-86 monthly prices and sales for a number of the fresh market vegetable crops.

The vegetable and melon estimates encompass commercial production only and exclude home and farm gardens. Vegetables grown for seed are also excluded. Potato and sweetpotato estimates are shown but are excluded from the summary of all vegetable crops.

Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door. For fresh market sales, the price is on a packed and loaded basis, F.O.B. shipping point.

Data presented in this publication are made possible by the cooperation of growers, processors, shippers, and other representatives of the California vegetable industry. Their cooperation is appreciated.

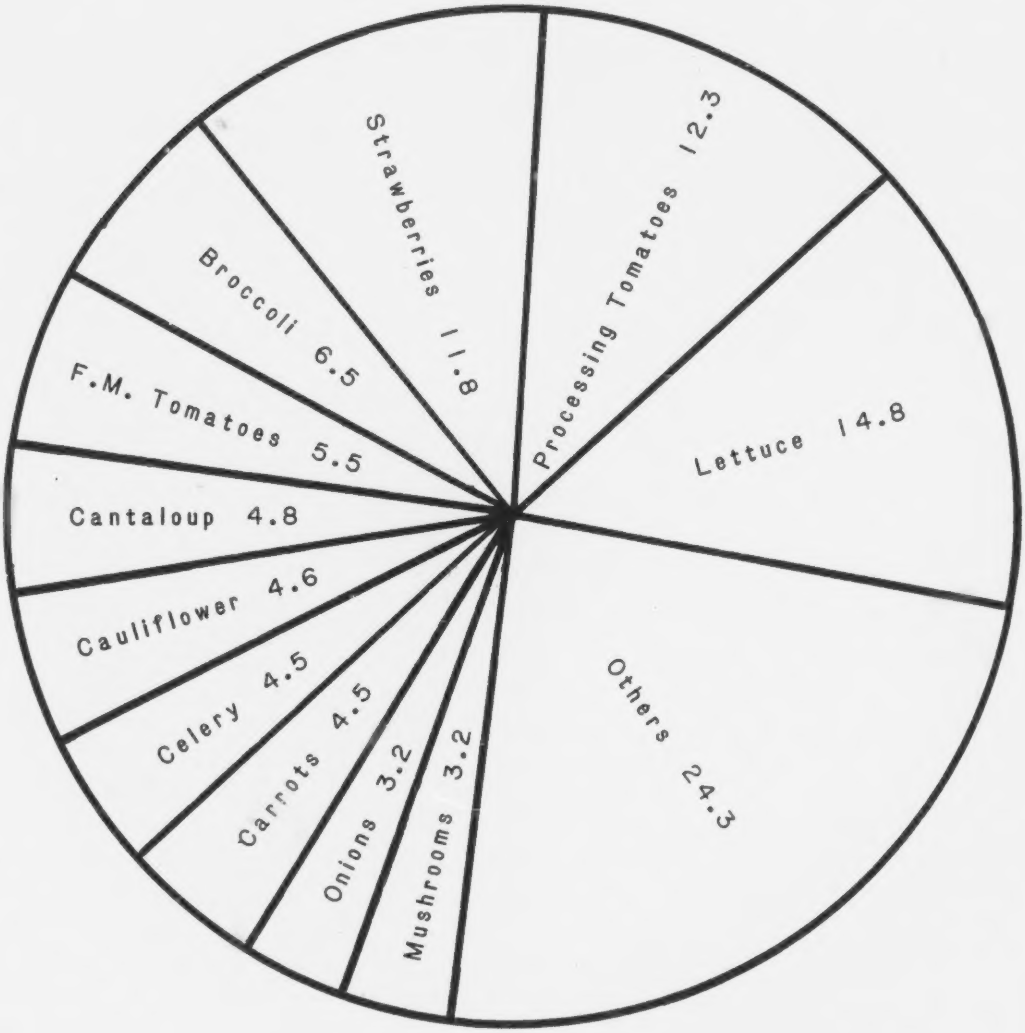
IMPORTANCE OF CALIFORNIA'S LEADING VEGETABLE CROPS - 1986*



* Based on value of production, excludes potatoes and sweetpotatoes.

1986 SUMMARY

California produced 14.8 million tons of vegetables from 994 thousand acres in 1986. Value of production was $3.278 billion compared to $3.069 billion in 1985.

Total production was up 4 percent from the 1985 harvest of 14.2 million tons. Production of tomatoes for fresh market and processing, asparagus, broccoli, cantaloup, carrots, cauliflower, melons, dry market onions, and strawberrries showed an increase from the previous year. Cucumbers for pickles, dried chili peppers, bushberries, celery, sweet corn, lettuce and mushrooms showed a decrease from 1985.

Season average prices were generally above 1985.

California in 1986 produced 51.3 percent of the principal fresh market crops and 56.5 percent of the major processing crops.

	1985	985,678	—	284,956	—	3,069,381
	1986	994,498	—	296,912	—	3,277,913

a/ For processing crops and the processed segment of dual utilization crops, price is based on equivalent returns at the processing plant door. For fresh market crops, price is on a packed and loaded basis, f.o.b. shipping point.

b/ Production includes some quantities not marketed because of shrinkage and loss. Shrinkage and loss excluded in computing total value: Onion — 1985 — 497,000 cwt., 1986 — 200,000 cwt.

c/ Miscellaneous vegetables cover a number of other vegetable crops not published separately. Included in this group are artichokes, green lima beans for processing, cabbage, cucumbers, garlic, green onions, oriental vegetables, bell peppers, watermelons, etc.

d/ Potatoes and sweetpotatoes are not included. These crops are included in field crop totals.

FOREWORD

This is the forty-third annual report on Dairy Industry statistics issued as a cooperative effort of the Crop and Livestock Reporting Service and the Milk Stabilization Branches of the California Department of Food and Agriculture. It contains, for the year 1986, a summary of statistical data which was originally published monthly in the "Dairy Information Bulletin." Comparative figures for earlier years, and selected special reports relating to the Dairy Industry are also presented. All changes from previously published data represent either corrections of errors or revisions based on receipt of more complete information.

Most of the statistical data contained in this bulletin is based on reports filed by individuals and firms engaged in the production,manufacture,and distribution of milk and dairy products in California. Although it is not possible to list all of these reporters individually, their cooperation is acknowledged with appreciation.

Data pertaining to the United States and to states other than California was secured from selected reports, of the United States Department of Agriculture. Estimates of the population of California were obtained from various reports of the California Department of Finance.

MILK COWS ON FARMS,
AVERAGE PRODUCTION PER MILK COW,
TOTAL PRODUCTION ON FARMS,
AND CASH RECEIPTS FROM MARKETINGS

On January 1, 1987 there were an estimated 986 thousand milk cows and heifers that had calved on dairy farms in California. This was 48 thousand fewer than were estimated for January 1, 1986. The estimated number of cows milked during the year 1986 was 1,013 thousand. As a comparison, an average of 1,004 thousand head were milked during the year 1985.

The average production of milk per cow in California during the year 1986 was 17,014 pounds.This was 313 pounds more than 1985. Total milk production during 1986 was 17,235 million pounds, 2.8 percent more than 1985 production.

Cash receipts from farm marketings of milk and cream in California during 1986 totaled approximately 2,062 million dollars. The comparable figure for 1985 was 2,078 million dollars.The increase in the annual average number of cows milked combined with the increase in average production per cow culminated in a record high production of milk in California during 1986. This production increase was not enough to offset the effect of generally lower producer prices in 1986 which resulted in the decrease in total cash receipts.

As of January 1, 1987, there was an estimated total of 10,547 thousand milk cows and heifers that had calved on farms throughout the United States. This was 630 thousand head fewer or 5.6 percent less than the number estimated for January 1, 1986. The average number of cows milked during the year 1986 was 10,839 thousand head. This was 177 thousand head fewer than the average for the year 1985.

1986	1,034	1,013	17,014	618	17,235	626	2,062,508
1987	986						

1/ Prior to January 1, 1970, milk cows and heifers, two years old or older.

2/ All milk and cream.

The average production of milk per cow in the United States during 1986 was 13,293 pounds. This was 299 pounds more than the 1985 production per cow. Total milk production during 1986 was 144,080 million pounds, 933 million pounds more than the production in 1985.

Cash receipts from milk and cream marketings in the United States during 1986 totaled approximately 17,824 million dollars. The comparable figure for 1985 was 18,063 million dollars.

California accounted for 12.0 percent of the milk produced in the United States during 1986 and received 11.6 percent of the cash receipts from farm marketings of milk and cream. California ranked second among the various states in the average number of milk cows on farms during 1986.This State also ranked second in production of milk per cow;second in total milk production; and second in cash receipts from farm marketings of milk and cream. While Washington had more milk production per cow, Wisconsin had more cows, produced more milk and received more from farm marketings of milk and cream than did California.

Estimates of the number of milk cows and heifers that had calved on farms by county and by crop reporting district in California at the beginning of 1986 and 1987 are given in Table 4. Of the total of 990 thousand head on farms in the State on January 1, 1987 approximately 59 percent were in the San Joaquin Valley, 28 percent in Southern California,and 6 percent in the Central Coast Counties. The five leading counties were San Bernardino, Tulare, Merced, Stanislaus, and Riverside. Collectively these counties accounted for about 62 percent of all the milk cows in the State.

1/ Dairy cattle population estimated as of January 1 for each year.

COMMERCIAL PRODUCTION

Approximately 17,170 million pounds of milk were produced commercially in California during the year 1986. Of this amount,16,644 million pounds were received as market grade milk and 526 million pounds were received as manufacturing grade milk. Between 1985 and 1986, the total commercial production increased 2.8 percent. Production of market grade milk increased 3.3 percent while the production of manufacturing grade milk decreased 12.4 percent. Market grade milk accounted for 96.9 percent of all commercial production in 1986,compared to 96.4 percent in 1985 and 94.8 percent ten years earlier in 1976.

The average milk fat content of all milk received at plants from producers in California during 1986 was 3.63 percent. That received as market milk contained an average of 3.63 percent milk fat, while that received as manufacturing grade milk contained an average of 3.74 percent milk fat.

The commercial production of all milk fat in California during 1986, amounted to approximately 623 million pounds, 2.3 percent more than was produced during 1985. Market milk fat amounted to 96.8 percent of production in 1986 compared to 96.3 percent in 1985. Between 1985 and 1986, the production of market milk fat increased 2.8 percent, while that of manufacturing milk fat decreased 12.6 percent.

The San Joaquin Valley accounted for 57.7 percent of all milk produced commercially in the State during 1986. The San Joaquin Valley, accounted for 57.4 percent of the market milk and 66.9 percent of the manufacturing milk. Approximately 30.3 percent of all milk and 31.2 percent of the market milk was produced in Southern California.The five leading counties in market milk production in the order of their importance during 1986 were: San Bernardino, Tulare, Riverside, Merced, and Stanislaus.These five counties accounted for 63.0 percent of the State's total production of market milk. The leading counties in manufacturing milk production were: Stanislaus, Merced, Humboldt, Glenn,and San Joaquin. These five counties accounted for 85.8 percent of the State's total manufacturing milk production. The five leading counties in total milk production were: San Bernardino, Tulare, Merced, Riverside, and Stanislaus. They accounted for 62.9 percent of the State's total milk production during 1986.

The California Crop and Livestock Reporting Service estimates the prices received by producers for many crops, livestock and livestock products. The livestock products include whole milk sold in wholesale quantities.Table 13 contains the estimated quantity-weighted-average monthly prices received by California producers for the period 1976 through 1986. Data for earlier years are available in other publications and have been published in previous annual California Dairy Industry Statistics.

The average producer prices paid monthly in California, for market and manufacturing milk from 1976 through 1986 are presented in Tables 14 and 15. Prices paid for market milk presented in Table 14 reflect the varying quantities of the product paid for in accordance with class use, as well as varying price levels for products with the same usage. Prices paid for manufacturing milk in Table 15, reflect primarily changes in price levels. Each price series is affected to some extent by variation in the average butterfat content of milk purchased from producers. The prices presented reflect the average test of the milk actually purchased each month from producers.

UTILIZATION OF COMMERCIAL PRODUCTION

During 1986, approximately 26.4 percent of the total milk fat produced commercially in this State was used in fluid market milk. Fluid market milk, for the purposes of Table 16, currently includes fluid whole milk, fluid lowfat milk, fluid skim milk, and yogurt. Fluid half-and-half used 1.7 percent of the milk fat; butter, 27.9 percent; cheese, including cottage cheese, 20.2 percent; condensed and evaporated milk products, 4.0 percent; frozen dairy products, 10.3 percent and all other manufactured products,9.5 percent. Approximately 28.1 percent of the total milk fat was used in fluid market milk and cream. Manufactured products used the remaining 71.9 percent.

Approximately 39.3 percent of the market grade milk produced in 1986 was used in Class 1 milk products and 6.3 percent was used in manufactured products where market grade milk was mandatory. The remaining 54.4 percent was used in making all other kinds of manufactured products.

1/ Includes fluid whole milk, fluid lowfat milk, concentrated fluid milk, and fluid skim milk through 1973. Yogurt is also included for the period 1974-1986.

2/ Includes fluid cream and half-and-half through 1973; half-and-half only for subsequent years.

3/ Includes cottage cheese.

4/ Includes evaporated milk and other condensed milk products.

5/ Includes sour cream and all other fluid cream for the period 1974-1986.

1/ Monthly and annual totals have been derived from unrounded data, therefore the sum of monthly data may not equal annual totals. The original unrounded data may be derived from Tables 7, 8, 9, 10, 11, 12, 20, and 21.

2/ All percentages have been computed from unrounded data.

3/ The skim milk available for manufacturing purposes in California is Total Commercial Skim Milk Production excluding Market Milk Class 1 and Mandatory Class 2 Skim Milk Usage.

SALES OF CLASS 1 MARKET MILK PRODUCTS

Total sales of Class 1 market milk products in California during 1986 amounted to approximately 758.8 million gallons. This included, 670.7 million gallons of fluid whole and low-fat milk, 56.1 million gallons of fluid skim milk, 11.7 million gallons of half-and-half,and 20.2 million gallons of yogurt and miscellaneous Class 1 products. The sales of fluid whole and low-fat milk, included approximately 19.1 million gallons to the Federal Government, and 651.5 million gallons to the remainder of the population, the civilian trade.

Beginning in January 1974, changes were made in the usage - classification of several products made with market grade milk. The changes, which are reflected in this section, are the following: (1) The product called flavored dairy drink was replaced by flavored lowfat milk,and flavored nonfat milk, and included as components of lowfat milk sales, and fluid skim milk sales,respectively; (2) All fluid cream items except half-and-half became Class 2 usage items; and (3) Yogurt sales in California plus sales of the Class 1 skim portion of imitation milk products have been included as part of Class 1 sales. Because of these changes, valid comparisons between 1986 Class 1 sales, and Class 1 sales for years prior to 1974 are difficult to make.

Between 1985 and 1986, total Class 1 sales increased approximately 0.3 percent. Sales of fluid whole and low-fat milk decreased 0.2 percent, sales of fluid skim milk increased 6.5 percent, and sales of fluid half-and-half were down 2.1 percent.

A summary of fluid milk sales by type of trade in California for the years 1969 through 1986 is presented in Table 36. During 1986, sales of market whole milk and low-fat milk, to the wholesale trade (stores, restaurants, schools, hospitals, etc.) by distributors, on their own routes, represented 84.1 percent of total sales; sales by distributors on their own routes to retail customers accounted for 0.1 percent; sales to retail customers cash-and-carry at the ranch and/or processing plant, 0.4 percent; sales to sub-distributors (peddlers)for resale to the trade, 12.5 percent; and sales to the Federal Government, 2.8 percent.

Approximately 214.6 million pounds of butter were manufactured in California during 1986.This was 6.2 percent less than 1985 and 46.0 percent more than the amount produced 10 years earlier in 1976.

The total manufacture of cheese, other than cottage cheese, in California during 1986 was approximately 443.2 million pounds. This production was 18.4 percent more than in 1985 and approximately four times greater than the amount produced 10 years earlier.Of the cheese manufactured in 1986 approximately 274.1 million pounds were whole-milk varieties and 169.1 million pounds were part-skim and full-skim varieties.Between 1985 and the year 1986,the manufacture of whole-milk cheese increased 16 percent and the manufacture of part and full-skim cheese increased 22.6 percent.Table 46 presents the annual manufacture of cheese in California by major varieties for the time period 1976 through 1986.

During 1986, approximately 98.3 million pounds of dry curd cottage cheese were manufactured in California. The addition of creaming mixtures to this curd, resulted in an output of 81.7 million pounds of cottage cheese and 62.3 million pounds of lowfat cottage cheese. The approximate combined total of 144.0 million pounds manufactured represents cottage cheese in the form in which most of it is consumed.Between 1985 and 1986,the manufacture of cottage cheese and lowfat cottage cheese combined increased about 2.4 percent.Lowfat cottage cheese manufactured increased 8.0 percent while the manufacture of cottage cheese decreased 1.6 percent.

During 1986 approximately 216.0 million pounds of bulk unsweetened condensed skim milk were manufactured. This was 0.2 percent more than was manufactured during 1985.

During 1986, approximately 273.9 million pounds of nonfat-dry-milk for human consumption and 2.5 million pounds of nonfat-dry-milk for animal feed were manufactured in California. This was a decrease of 13.0 percent from 1985 for nonfat-dry-milk for human consumption and an increase of 46.5 percent of nonfat-dry-milk for animal feed.

Approximately, 10.6 million gallons of fluid buttermilk were manufactured in California during 1986. This was 4.5 percent more than the output during 1985.

The manufacture of frozen dairy products in California, during 1986 included approximately 107.2 million gallons of ice cream, 31.6 million gallons of ice milk, 4.7 million gallons of sherbet, 0.1 million gallons of imitation ice cream, and 0.1 million gallons of imitation ice milk.The approximate total of 143.8 million gallons was 0.3 percent more than that manufactured during 1985.The previous figures do not include approximately 9.0 million gallons of frozen yogurt manufactured in California in 1986. From 1985 to 1986 the manufacture of ice cream increased approximately 0.4 percent.During the same period the manufacture of ice milk increased 2.0 percent, the manufacture of sherbet decreased 5.4 percent,the manufacture of imitation ice cream declined 34.9 percent, and the manufacture of imitation ice milk was down 61.8 percent.

The population of California on July 1, 1986 was estimated by the California Department of Finance to be 26,846,200. This represented an approximate increase of 481 thousand persons or 1.8 percent from the same date a year earlier.

Although no data are collected which directly relate to the consumption of dairy products in California, the quantities of some products either sold or manufactured in California represent reasonably well the quantities of these dairy products consumed in the State. These are products which for the most part are neither imported nor exported in significant amounts and which are not storable for any extended period of time.Products that have these characteristics and for which sales data are available are: Fluid whole and lowfat milk, fluid skim milk, yogurt, half-and-half, and miscellaneous Class 1 products. The quantities of manufactured products produced in this State which may be assumed to represent those consumed here are limited to cottage cheese,buttermilk,and frozen products.

The sales of various dairy products and the manufacture of selected processed dairy products are expressed in either quarts per capita or pounds per capita in Table 62. Population figures used are those shown in the first column of the Table. All per capita estimates have been derived from unrounded data.

Per capita sales of all Class 1 dairy products in California during 1986 amounted to 113.06 quarts. This total of 113.06 included: 99.94 quarts of fluid whole and lowfat milk, 8.36 quarts of skim milk, 3.02 quarts of yogurt and miscellaneous Class 1 products, and 1.74 quarts of half-and-half. Valid comparisons of the per capita sales of these items for 1974 and later cannot be made with data for 1973 and earlier due to product reclassifications and changes in reporting procedures. For example, fluid creams are no longer Class 1 products while yogurt is a Class 1 product. Flavored dairy drinks are now included with either fluid whole milk, fluid lowfat milk, or fluid skim milk, depending on the fat content of the flavored dairy drink reported.

In 1986 manufacture per capita of creamed and lowfat cottage cheese in California totaled 5.36 pounds, an increase of 0.6 percent from 1985. Creamed cottage cheese accounted for 3.04 pounds per capita, and lowfat cottage cheese accounted for 2.32 pounds per capita. Between 1985 and 1986, the manufacture per capita of creamed cottage cheese decreased 3.5 percent and the manufacture per capita of lowfat cottage cheese increased 5.9 percent.

During 1986, the manufacture per capita of buttermilk in California amounted to 1.58 quarts. This approximated an increase of 2.6 percent from the manufacture per capita existing during 1985.

Manufacture per capita of all frozen products in California during 1986 totaled 21.42 quarts, a decrease from 1985 of 1.5 percent. The manufacture per capita of all frozen products included 15.96 quarts of ice cream, 4.71 quarts of ice milk,0.70 quarts of sherbet,0.02 quarts of imitation ice cream,and 0.02 quarts of imitation ice milk. Between 1985 and 1986 the manufacture per capita estimates for the various frozen dairy products indicate that only ice milk experienced an increase. Ice cream exhibited a 1.4 percent decrease. While ice milk experienced a 0.2 percent increase, sherbet was characterized by a decrease of 7.9 percent. Imitation ice cream decreased 33.3 percent and imitation ice milk manufacture per capita decreased 66.7 percent.

1/ Estimates have been computed from unrounded data.

2/ Subsequent to 1973, flavored dairy drink sales have been categorized as either flavored fluid milk or flavored fluid skim milk sales depending on fat content.

3/ Subsequent to 1975, out-of-state yogurt sales have been excluded from Class 1 product sales.

4/ Subsequent to 1973, fluid cream sales have been excluded from Class 1 product sales.

MINIMUM PRICES

As specified in Division 21, Part 3, Chapter 2 of the Food and Agricultural Code of the State of California, the Milk Stabilization Branch establishes minimum prices to be paid to producers by handlers for market milk used in the various usage classifications for each marketing area in the State.

Commencing August 1, 1978 minimum Class 1 prices were established by means of a mathematical formula. The factors used in the formula and their respective weights have been the following: Cost of production, 43 percent; Class 4 price, 42 percent; and Real net spendable earnings as published by the Employment Development Department for the Los Angeles - Long Beach metropolitan area, 15 percent. Effective August 1, 1982, the real net spendable earnings factor was permanently replaced by a real average weekly earnings factor. This change in the formula was made because of the unavailability of the real net spendable earnings factor. The formula-determined Class 1 prices are calculated bi-monthly by the Milk Stabilization Branch of the Department of Food and Agriculture and may be subject to change as a result of public hearings.

Minimum class prices in effect during 1986 are shown in Tables 63 through 66.

1/ Prices have been calculated from the price information presented in Tables 64 and 65 on a f.o.b. Distributor's Plant basis for 3.5 percent butterfat and 8.7 percent solids-not-fat milk.

SALES OF MARKET WHOLE MILK AND LOWFAT MILK
BY SIZE AND TYPE OF CONTAINER,
AND BY TYPE OF TRADE

In October 1986, all market milk distributors in California were requested to complete a special one-page form relating to their sales of market whole milk and lowfat milk by size and type of container and by type of trade. A similar survey for each October has been made every year since 1951.

Table 67 contains summary tabulations of the data reported on the special survey forms used for October, 1986. In this table, all sales are expressed in gallon units. For example, sales in quarts, represents the number of gallons(expressed as quart units)sold rather than the number of quarts sold. This results in greater comparability and facilitates the computation of percentage distributions.

Sales by type of trade were reported under the headings of: wholesale, retail, cash-and-carry, peddler, and Federal Government. Since some routes, particularly for the smaller distributors and some of the peddlers, were probably "combination" routes, it seems likely that all sales are not properly classified as to type of trade. However, this factor is so small that it does not appear to have had any significant effect upon the overall results.

Users of these data should note that the survey summaries do not include all sales of fluid milk in California. For the State as a whole, the sales as reported in the summaries account for a sample of approximately 99.8 percent of all market whole milk and lowfat milk sales in California.

1/ All calculated percentages reflect rounding, therefore the addition of percentages for Types of Trade may not sum to 100 percent.

2/ Calculated percentage is either less than or equal to 0.05 percent.

PLANTS REPORTING SALES OF FLUID MARKET MILK

The number of plants reporting sales of fluid market milk during the month of December by county of plant location for the years 1976 through 1986 is shown in Table 68. During this ten-year period, the number of plants has decreased from 151 in 1976 to 65 in 1986, a decline of 57.0 percent.

4. Central Coast - Dry Beans, Hay, Potatoes, Small Grains, Sugar Beets.
5. San Joaquin Valley - Alfalfa Seed, Cotton, Corn, Dry Beans, Hay, Potatoes, Rice, Safflower, Small Grains, Sugar Beets, Sweetpotatoes.
6. South Coast - Dry Beans, Hay, Potatoes, Small Grains, Sugar Beets.
7. Southeastern Interior - Alfalfa Seed, Cotton, Hay, Small Grains, Sugar Beets.

Notes

Area boundaries are approximate only. Field crops are also raised in several small areas not included within these boundaries.

FOREWORD

This bulletin brings together the basic statistical record for California field crops: grains, hay, cotton, sugar beets, and others in this class. Current reports for each of the series are available as separate releases.

The California Agricultural Statistics Service is the California unit of the National Agricultural Statistics Service, United States Department of Agriculture and, under a cooperative agreement, serves as the Agricultural Statistics Branch of the California Department of Food and Agriculture. All services are correlated with the National program to provide uniform statistical records of the Nation's agriculture. As part of the California Department of Food and Agriculture, this office develops additional data and necessary statistical records pertaining to California agriculture. This cooperative arrangement eliminates duplication of effort and makes possible a more thorough coverage of this field of work.

Acknowledgement is due a large number of people and concerns to whom we are indebted for cooperation in developing these agricultural records. Special credit in this respect is due the many loyal, voluntary crop reporters from all parts of the State, who generously give their time in reporting to the Service. Recognition is also due our telephone and field enumerators whose continued hard work and broad knowledge of the State's agriculture are invaluable. Statisticians presently responsible for much of the data in this bulletin are Joe Seibert, Sammye Crawford, Peggy Stringer, Dale P. Hawks, and Ann Roberts, Statistical Assistant.

a/ Not estimated.
b/ Estimate discontinued
c/ Not available.
d/ Cotton: Yield reported in pounds per acre, production -- 480 lbs. net per bale, average price report in cents per pound. Excludes American-Pima.
e/ Excludes beans grown for garden seed.
f/ Relates to year of harvest. Includes some acreage carried over and harvested the following spring.
g/ Production is on a clean basis.
